

From waste to resource

ballistic classifier from SUT

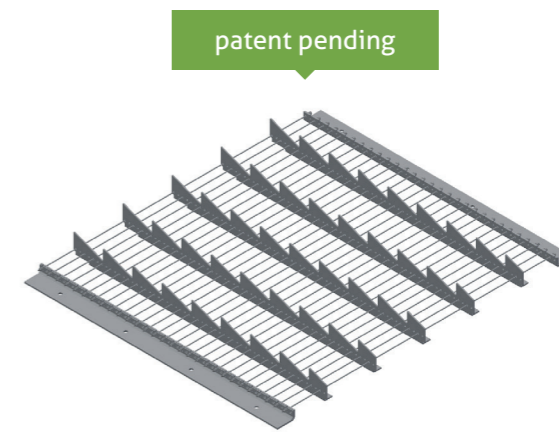

- separates wet and dry waste
- throughput performance up to 200m³/h (30t/h)
- extremely low operating costs
- 90% selectivity guaranteed

benefits

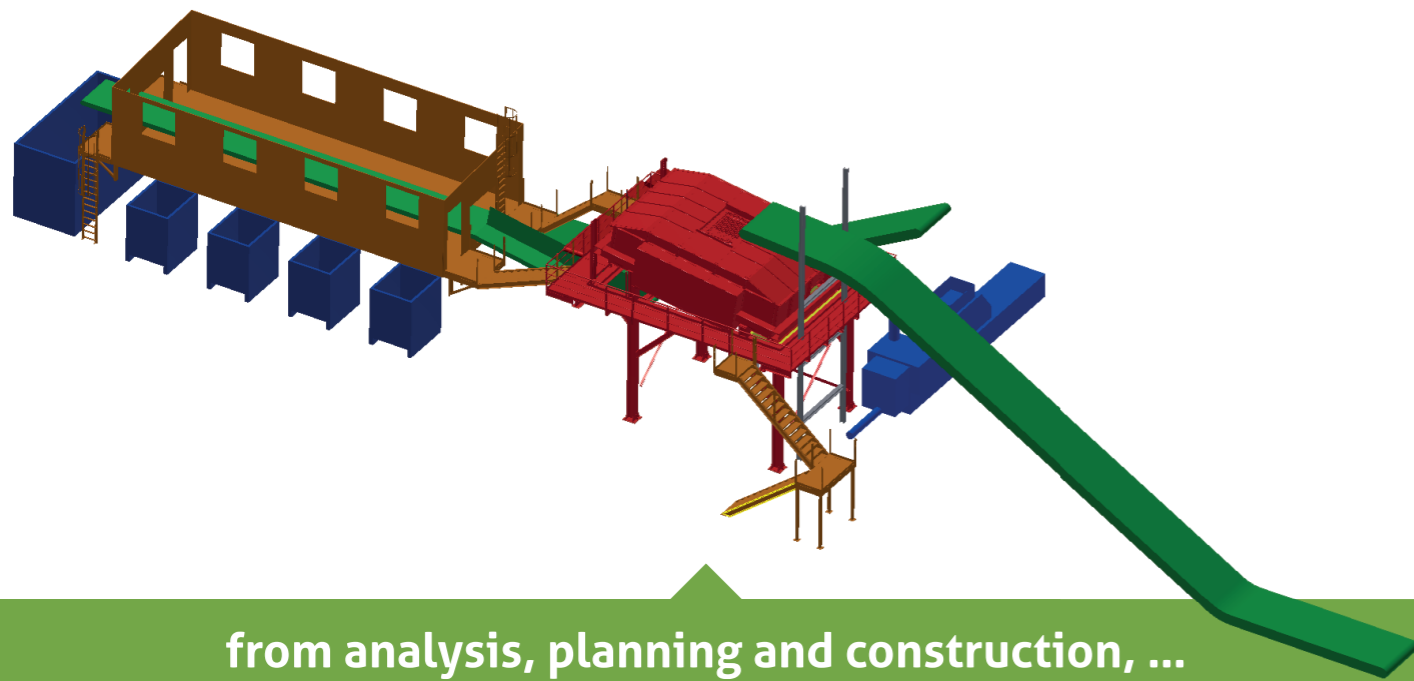

- rugged machinedesign
- massive bearing
- easy to maintain
- fast sieve-exchange

wire mesh for wet waste
moisture content up to max. 50%
seperating cut >20mm

strainer for dry waste
seperating cut >20mm

from analysis, planning and construction, ...
up to production, montage and maintenance

COMPANY

Since twelve years Sinawehl Umwelttechnik (environmental technique) is an internationally successful specialist for machines and complete system for waste treatment and waste recovery/recycling. The company SUT focused on two segments – the recovery-technique and the environmental technique. Our activities cover the entire consultation, planning, construction, production, installation and commissioning of the plant.
